Title: A Bulgarian SME produces wooden pellets and furniture parts and accessories. The company is looking for an industrial manufacturer of equipment for drying of timber and wooden boards , through a a service or supplier agreement

POD Reference: BRBG20211213001

Summary: A Bulgarian SME produces wooden pellets and furniture parts and accessories. The company is looking for an industrial manufacturer of equipment for drying of timber and wooden boards, through a a service or supplier agreement

Description: The company is established in 2010 in Southern Bulgaria in a region with rich forests. They have always kept a consistent vision towards technological development of the manufacturing processes. They need to increase the quality and raise productivity by introducing a more sophisticated installation for timber and wood drying .

In details, they would like to install a more advanced line of drying chambers and /or ovens. More specifically ,the ideal system should provide high performance as regards reaching a moisture content suitable for the material, which will be used for the production of furniture legs and accessories .

The manufacturers of equipment for drying of timber and wooden boards,sought by the Bulgarian producer should be able to deliver a complete equipment consisting of drying chambers , a boiler installation, automatic feeder on wooden chips ,fully automatic control system ,and assembly services.

Technical Specification or Expertise Sought: The manufacturers of equipment for drying of timber and wooden boards , sought by the Bulgarian producer should be able to deliver a complete equipment consisting of : 3 drying chambers for wood /beech and oak mainly/ , with a total capacity 100m3. Chambers capacity must be 25 m3/35 m3 /50 m3, with a boiler installation, fed by automatic feeder for wooden chips. Fully automatic control system that monitors these systems full-time is needed. Assembly services are also required. Preferably the installation must include automation of the drying process with the PC-based control systems.

Stage of Development: Already on the market
